FOR IMMEDIATE RELEASE

CES Renews Licensing for Voyager® for Centricity Operations Resource Management System (ORM)

DALLAS, TX (March 31, 2004) – Recursion Software announced today that CES International, leading provider of outage and network management systems for distribution utilities, has renewed its licensing of Voyager® award-winning middleware application development platform. Voyager® is used by a wide cross-section of industries including energy, banking, government, information technology and telecommunications to speed development of Java™ based applications.

"Voyager® has been a mission-critical component of our Centricity Operations Resource Management system for the last 3 years. Centricity ORM is an integrated and flexible software system that helps public utilities reduce service restoration time, improves operational efficiency and safeguards workers and the public," said Terry Niels, Vice President Product Strategy, CES International. "We are renewing our licensing agreement not only because the product is exceptional, but Recursion Software's technical support staff is extremely responsive and knowledgeable," said Hunnu Huhdanpaa, Development Manager at CES International. "We need to be very responsive to our customers and Voyager® helps us do that."

"We are very pleased that CES International continues to entrust Recursion Software with supporting their mission-critical, security sensitive applications development with our Voyager® product, said Paul Lipari, CEO, Recursion Software. "Recursion Software is totally focused on the needs of applications developers such as Mr. Huhdanpaa's team at CES International."

Voyager® supports the leading messaging protocols (IIOP, RMI, SOAP, DCOM) naming protocols (RMI Naming, CORBA Naming, JNDI), communications protocols (TCP/IP, SSL, SOCKS) and messaging patterns (synchronous, one-way, delayed-synchronous, asynchronous). "Updates are released on a timely basis, which is essential to keeping our applications development work on schedule" said Mr. Huhdanpaa, Development Manager at CES International.
