FOR IMMEDIATE RELEASE

Recursion Software, Inc. Introduces The Adaptive Technology Suite at Gartner Application Development Summit 2005

Roadmap for handling the challenges and opportunities facing software developers today.

GARTNER Application Development Summit 2005, Dallas, Texas, September 13, 2005 - Recursion Software, Inc., a global provider of powerful application development solutions, today introduces The Adaptive Technology Suite. The Adaptive Technology Suite provides solutions to a number of issues raised by software architects and developers, including:

- Ability to move massive amounts of data between servers and clients at high speed
- Making established backend systems work with new desktop environments
- Building a framework that will ease integration at the edges of the network
- Leveraging multi-language in-house applications while integrating new third party applications.

IT organizations are being asked to be more agile. “Our customers are software architects and developers, experts in solving complex application development problems who are looking for specific solutions to specific problems. Our Adaptive Technology Suite offers solutions to problems including prototyping new applications on different operating systems and hardware, developing applications for distributed computing environments, implementing a Service-Oriented Architecture and Web services. Simply put, we provide specific solutions to complex problems in the simplest way possible”, said Paul Lipari, President and CEO of Recursion Software, Inc.

The Adaptive Technology Suite includes:

Cinergi™ - Applications Integration Development Platform. Cinergi quickly and easily exposes legacy code and enables reuse of the code in new applications. Code can also be exposed and integrated with third party applications. New applications can be prototyped with ease.

Voyager® - Applications Development Platform for Distributed Environments. Voyager provides the framework, with built-in advanced functionality, that software developers and architects need to create distributed applications.

Toolkits – Toolkits are pre-written sets of code, class libraries, that save developers time and money when building or modifying applications. Toolkits are a low cost way to maximize development time. Recursion Software, Inc. offers Java, C++ and .NET libraries.

As software architects and developers are faced with more and more challenges, the need to use software development tools that quickly and easily solve complex problems grows. Recursion Software, Inc. is a software engineering driven company that recognizes these challenges and offers The Adaptive Technology Suite to meet the challenges of today's applications development world. Recursion Software, Inc. has a long history of providing solutions to the most pressing challenges facing software developers as well as enabling software developers and architects to take advantage of new directions in applications development.

About Recursion Software, Inc.

Recursion Software, Inc. is one of the fastest growing high tech companies in the Dallas-Fort Worth area, according to the Metroplex Technology Business Council (MTBC) of Richardson, Texas. Recursion Software, Inc. received the prestigious Titan Fast 50 Award for 2005 at the annual Tech Titans Awards Gala on August 19, 2005 at the Eisemann Center in Richardson, Texas. Founded in 2001, Recursion Software, Inc. provides software engineers with powerful software development tools. To learn more about us visit our website at www.recursionsw.com.

About Gartner Application Development Summit 2005

Gartner Application Development Summit 2005 is the most focused event of its kind designed to help enterprises prepare for the challenges and optimize the opportunities as they build an agile, yet more robust and secure application infrastructure. Gartner Application Development Summit hits the critical spot between strategic planning and tactical advice for IT organizations as collaboration, accountability, compliance, and portfolio and resources management become key capabilities of the new Application Development team. Additional information is available at www.gartner.com/us/adsummit.
