Recursion Software Offers VOYAGER *Edge*TM 6.0.1 Community Edition

-- Developers offered free license to test enhanced framework for next-generation distributed knowledge networks

FRISCO, Texas (December 13, 2006) — Following the recent launch of VOYAGER *Edge* 6.0, Recursion Software, Inc., a global provider of software development solutions, today announced the availability of Voyager *Edge* 6.0.1 Community Edition. This community license provides developers free access to the complete VOYAGER *Edge* framework for developing and extending applications to wireless and embedded systems, and is specifically reserved for development and modeling purposes only. Voyager *Edge* bridges the gaps in the enterprise computing environment by extending .NET and/or Java server functionality to PDAs, smart phones, sensors, cameras, RFID readers and more, to deliver business intelligence to multiple locations.

VOYAGER *Edge* enables corporations and organizations to build intelligent and dynamic applications. These applications can be widely distributed and run on multiple wireless networks while maintaining interoperability with many different enterprise systems.

“VOYAGER *Edge* 6.0.1 opens the door to unprecedented capabilities to create software applications using intelligent mobile agent technology that seamlessly spans multiple systems and operating environments,” said Paul Lipari, president and CEO, Recursion Software, Inc. “It provides virtually unlimited flexibility for developing applications that can deliver and retrieve highly targeted information in real time to the widest range of devices across widely distributed and ad hoc network environments. The widespread availability of the free Community Edition will introduce both the Java and .NET developer communities to a solution that is paving the way for next-generation applications development.”

The Community Edition is available for free download on the Recursion Software Website, www.recursionsw.com, and several popular Web developer sites. These sites include download.com and all other cnet.com partner sites. The program is for development only, and must be restarted every eight hours. The license will expire December 5, 2007, regardless of when the download is initiated, but can be extended through future, free version upgrades.

About Recursion Software, Inc.

Recursion Software, an innovative provider of distributed computing solutions, works at the forefront of technology to help enterprises create and extend next-generation applications. Founded in 2001, Recursion was built on proven technologies through the acquisition of intellectual property and several product lines from ObjectSpace, Inc. The company has added increased functionality to its intelligent mobile agent offerings and has built new products that address today's most pertinent business challenges. Recursion has been issued multiple patents for its mobile agent and distributed computing technology, and continues to evolve its offerings. Recursion's clients include defense, financial, computer technology and telecommunications technology leaders. For more information on Recursion Software, go to: www.recursionsw.com.
